

# W DEPARTMENT OF REHABILITATION MEDICINE The UW's Traumatic Brain Injury Model System

invites you to join us for an information and discussion group on topics relating to life after a traumatic brain injury (TBI)

## Did my brain injury cause this?

Brain injury survivors often experience a wide range of symptoms after traumatic brain injury (TBI). Other conditions, however may misleadingly mimic the symptoms of TBI. Dr. Zumsteg helps patients, families, and other health care providers determine which symptoms are due to TBI and which may be from another cause. Her practice helps direct the best treatment for each specific issue an individual is facing.

Please join us for an informative discussion on the differences between headache, mild TBI, and severe TBI. This forum will include general tips for managing headaches, mood, sleep and thinking changes, as well as guidelines for when to see a doctor for further evaluation.

### Jennifer Zumsteg, MD

*(Assistant Professor;  
Department of Rehabilitation Medicine)*

UNIVERSITY OF WASHINGTON  
TRAUMATIC BRAIN INJURY  
MODEL SYSTEM

**Wednesday, April 8<sup>th</sup>, 2015**
